Centric Engineering Becomes the First Company to Join co-elevate

FOR RELEASE — Wednesday, November 4, 2026, 10:00 AM ET

co-elevate inc. and Centric Engineering Corporation today announced that Centric has joined co-elevate, bringing both teams under one banner. Coming together expands the collective expertise, experience and trusted relationships available to clients, while marking an important milestone as the first company to join co-elevate's operating platform.

co-elevate's engineering roots extend more than 50 years. Its current principals built the company it is today around a people-centred philosophy, developing and refining the leadership and delivery systems that bring it to life. They now believe this approach can benefit people and teams beyond co-elevate.

"For nearly a decade we have worked to build the kind of engineering company we wished existed, developing systems and ways of working that can support more people," said Travis Parker, co-Managing Director and Principal of co-elevate. "Centric is the first company to join us, and we are proud of the experience and relationships it brings."

"Growing well means protecting the relationships people have earned and giving teams room to lead and develop," said Adam Palmer, co-Managing Director and Principal of co-elevate. "We see a strong values fit with Centric, and we intend to make the transition thoughtful for their people and ours."

Founded in 2013, Centric has developed long-standing client relationships and experience in residential, commercial, industrial and agricultural structural engineering. Its practice and relationships complement co-elevate's structural and civil engineering services, strengthening the combined team's capabilities. "I am proud of the team, reputation and relationships we have built at Centric," said Darryl Twynstra, former Principal/Owner of Centric. "I have gotten to know Adam and Travis. Our values are similar, and we believe we can accomplish more by going in the same direction together."

Centric's existing team and client relationships will continue as part of co-elevate. Darryl remains in senior leadership as Director of Engineering - Structural, focused on client relationships, talent and business development, while continuing to support key project conversations and complex engineering issues. Technical delivery teams and existing obligations remain a priority.

Clients can continue reaching their familiar Centric contacts by existing email and phone channels.

About co-elevate: co-elevate is a structural and civil engineering consulting firm committed to creating a more fulfilling and inspiring work experience. Through its people-centred approach, the firm brings together talented professionals who collaborate, challenge conventional ways of working and deliver thoughtful engineering solutions for their clients.

About Centric Engineering: Centric Engineering Corporation provides structural engineering consulting services across residential, commercial, industrial and agricultural sectors, with an emphasis on practical solutions and collaborative client relationships.
